

Ecometrics

AI Financial & Wealth Operating System — modular platform connecting market data, AI, simulation, risk management, capital allocation, execution, and wealth goals.

Core principle: Build the brain first. Give the brain a body later. Expand the body only when the system proves it needs more compute.

This repo starts at Phase 2 — Cloud Foundation of the master roadmap.

Structure

ecometrics/services/api-gateway - First service: FastAPI app, health checks

.devcontainer - GitHub Codespaces config

.github/workflows - CI: lint + test on every push

docs - Architecture and roadmap reference docs

.env.example - Template for secrets/config

Getting started

1. Open this repo in GitHub Codespaces (Code then Codespaces then Create codespace)
2. Copy .env.example to .env and fill in real values once you have a database
3. Run: `cd services/api-gateway && pip install -r requirements.txt && uvicorn app.main:app --reload`
4. Visit <http://localhost:8000/health>

Deployment

Deployed via Render, connected to this GitHub repo.
